

# JVC

## SERVICE MANUAL

EDITING CONTROL UNIT

### RM-G810U

#### SPECIFICATIONS

Power source : DC 12 V ---  
Power consumption : 6.6 W  
Operating temperature range : 5°C to 40°C  
Dimensions : 430(W) x 118(H) x 322(D) mm  
Weight : 6.0 kg (13.3 lbs)

**VCR controls**  
Control buttons : PLAY, REC, FF, REW, STOP, PAUSE/STILL, SEARCH, JOG  
Dial search : Continuously variable depending on the player and recorder models used.  
Jog dial : Provided

**Editing controls**  
Edit modes : Assemble and Insert  
Edit-point memory : Edit-in and edit-out points held in memory (preview, perform and review possible)

Edit-point shift : Possible by frame in both directions  
Editing accuracy : Within ±2 frames  
Preroll time : Selectable 3 sec, 5 sec, 7 sec  
10 sec  
**Counter display**  
Time counter : Up to 9 hours, 59 minutes, 59 seconds, 29/24 frames  
Display : Total time/elapsed time of an edit/ edit-in and edit-out points/edit duration  
Display medium : LED  
**Accessories**  
Remote control cable x 2 (5 m/16 ft)

*Design and specifications subject to change without notice.*

# TABLE OF CONTENTS

| Section                                 | Title                                                     | Page |

| 3.9                                     | JOG CIRCUIT BOARD                                         | 3-11 |
| 3.10                                    | REAR, DIP SW, FRAME SELECT AND<br>SLIDE VR CIRCUIT BOARDS | 3-12 |
| 3.11                                    | OVERALL WIRING                                            | 3-13 |
| 3.12                                    | IC BLOCK DIAGRAMS                                         | 3-14 |
| <b>4. EXPLODED VIEWS AND PARTS LIST</b> |                                                           |      |
| 4.1                                     | PACKING ASSEMBLY                                          | 4-1  |
| 4.2                                     | CHASSIS ASSEMBLY                                          | 4-2  |
| <b>5. ELECTRICAL PARTS LIST</b>         |                                                           |      |
| 5.1                                     | MAIN BOARD ASSEMBLY                                       | 5-2  |
| 5.2                                     | OPERATION BOARD ASSEMBLY                                  | 5-5  |
| 5.3                                     | REAR BOARD ASSEMBLY                                       | 5-5  |
| 5.4                                     | DIP SW BOARD ASSEMBLY                                     | 5-5  |
| 5.5                                     | DISPLAY BOARD ASSEMBLY                                    | 5-6  |
| 5.6                                     | JOG BOARD ASSEMBLY                                        | 5-6  |

# Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

## ● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  symbol and shaded (■) parts are critical for safety.

Replace only with specified part numbers.

**Note:** Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.  
Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

|                    |                                      |            |
|--------------------|--------------------------------------|------------|
| 1) Insulation Tape | 3) Spacers                           | 5) Barrier |
| 2) PVC tubing      | 4) Insulation sheets for transistors |            |

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

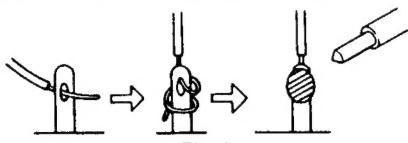

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

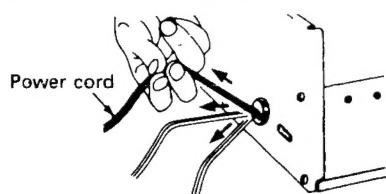

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) Connector part number : E03830-001

2) Required tool : Connector crimping tool of the proper type which will not damage insulated parts.

3) Replacement procedure

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

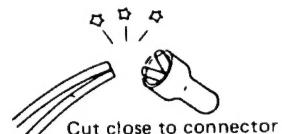

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

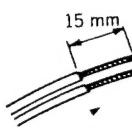

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

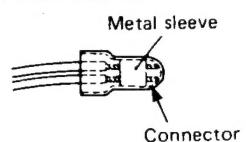

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

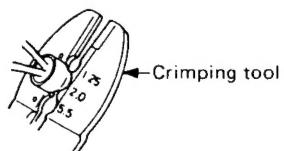

Fig. 6

(5) Check the four points noted in Fig. 7.

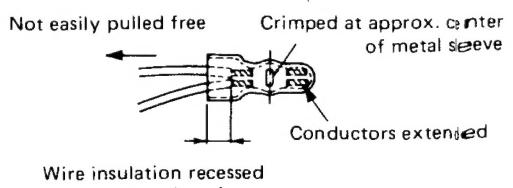

Fig. 7

## ● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

### 1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

### 2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

### 3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

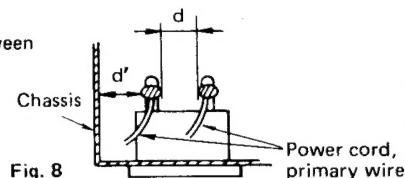

Fig. 8

### 4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

#### Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

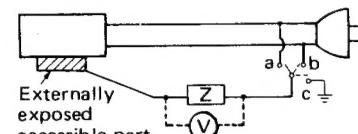

Fig. 9

### 5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

#### Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

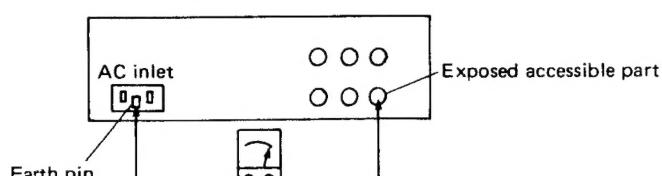

Fig. 10

#### Grounding Specifications

| Region             | Grounding Impedance (Z)  |
|--------------------|--------------------------|
| USA & Canada       | $Z \leq 0.1 \text{ ohm}$ |
| Europe & Australia | $Z \leq 0.5 \text{ ohm}$ |

| AC Line Voltage              | Region             | Insulation Resistance (R)                     | Dielectric Strength             | Clearance Distance (d), (d')                                                                 |
|------------------------------|--------------------|-----------------------------------------------|---------------------------------|----------------------------------------------------------------------------------------------|
| 100 V                        | Japan              | $R \geq 1 \text{ M}\Omega /500 \text{ V DC}$  | AC 1 kV 1 minute                | $d, d' \geq 3 \text{ mm}$                                                                    |
| 100 to 240 V                 |                    |                                               | AC 1.5 kV 1 minute              | $d, d' \geq 4 \text{ mm}$                                                                    |
| 110 to 130 V                 | USA & Canada       | —                                             | AC 900 V 1 minute               | $d, d' \geq 3.2 \text{ mm}$                                                                  |
| 110 to 130 V<br>200 to 240 V | Europe & Australia | $R \geq 10 \text{ M}\Omega /500 \text{ V DC}$ | AC 3 kV 1 minute<br>(Class II)  | $d \geq 4 \text{ mm}$                                                                        |
| 200 to 240 V                 |                    |                                               | AC 1.5 kV 1 minute<br>(Class I) | $d' \geq 8 \text{ mm} \text{ (Power cord)}$<br>$d' \geq 6 \text{ mm} \text{ (Primary wire)}$ |

Table 1 Specifications for each region

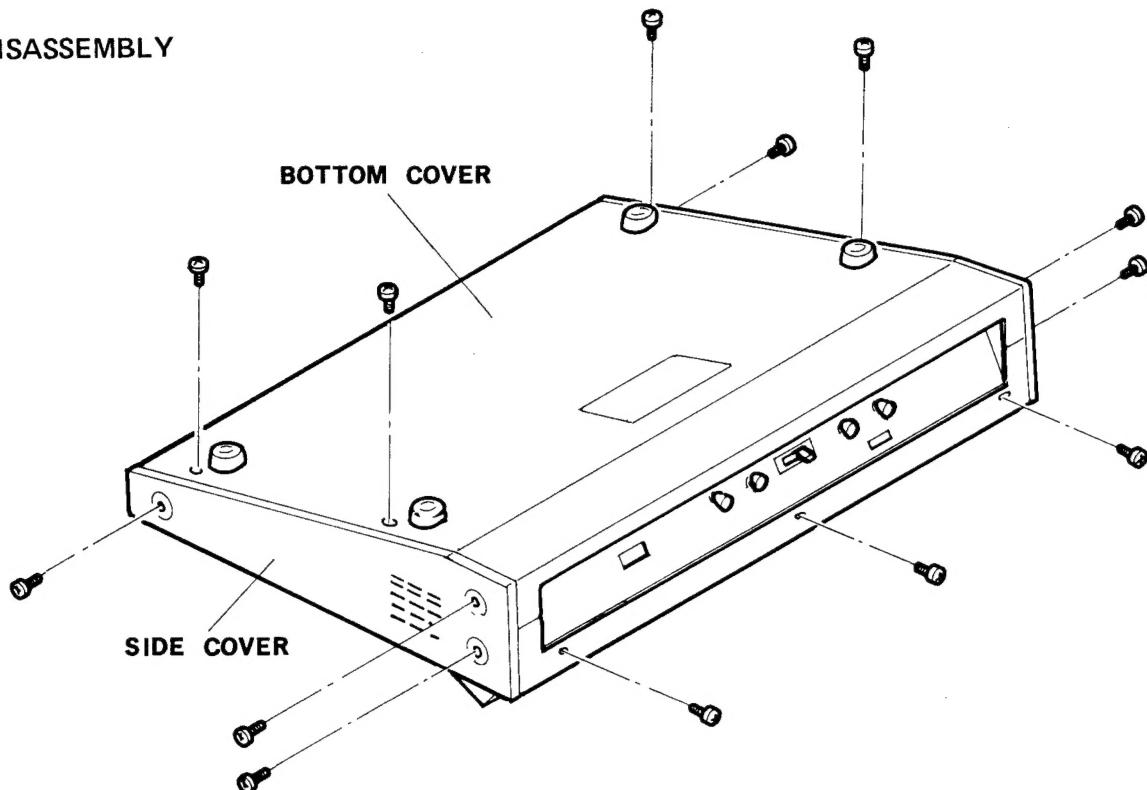

| AC Line Voltage              | Region             | Load Z                                                           | Leakage Current (i)                                      | a, b, c                  |

|                              |                    | $0 - \text{---} - 0$<br>$50 \text{ k}\Omega$                     | $i \leq 0.7 \text{ mA peak}$<br>$i \leq 2 \text{ mA dc}$ | Other terminals          |

Table 2 Leakage current specifications for each region

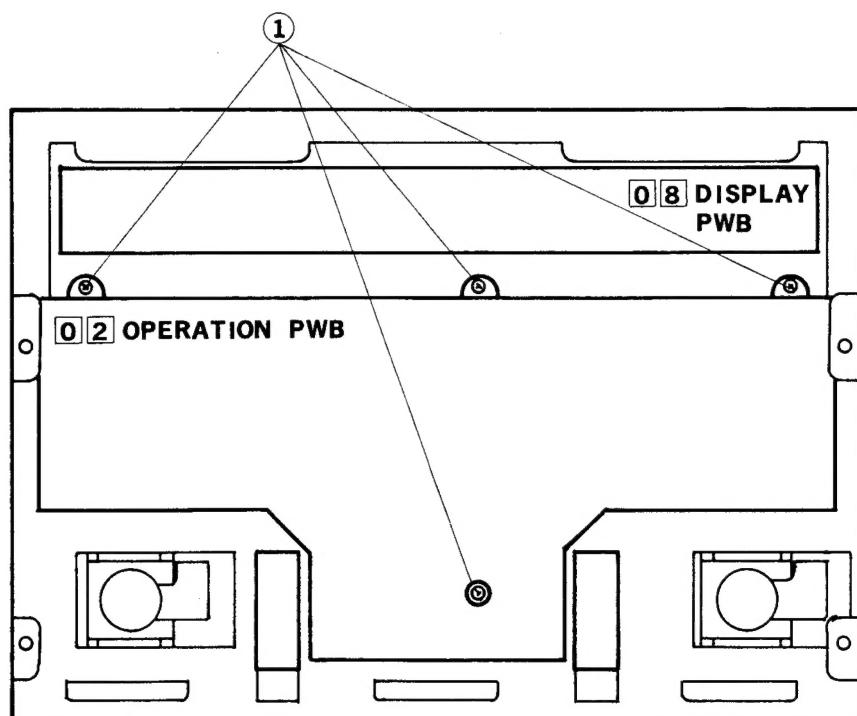

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

## SECTION 1 GENERAL DESCRIPTION

### 1.1 DISASSEMBLY

Take out the screws indicated in the figure to remove the bottom cover.

Remove the search and jog knobs (see next Section), slide knobs and take out 4 screws ① to separate the top cover and main chassis.

## 1.2 SEARCH/JOG KNOBS AND CONTROL ASSEMBLY

1. Position the search/jog knob as indicated in Fig. 1.
2. Remove tire ①. Refer to Fig. 2.
3. Insert a metric hex wrench (1.5 mm) into hole A and loosen the setscrew. Remove the jog knob ②.
4. Take out 3 screws ③ and remove the search knob ④.
5. Take out 4 screws ⑤ and remove the search/jog control assembly.

**Note:** Do not remove the jog board from the search/jog control assembly. Since adjustment requires a special fixture, the board is not replaced separately.

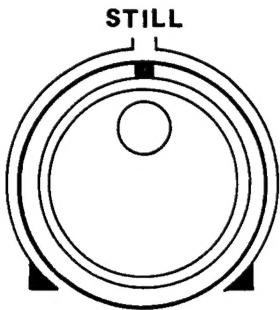

Fig. 1 Search/jog knobs position

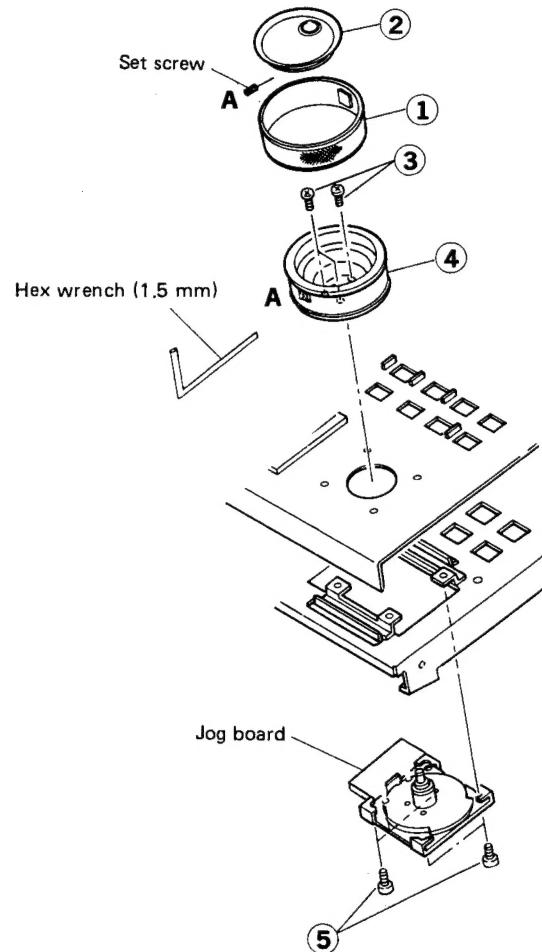

Fig. 2 Search/jog knobs and control assembly

## 1.3 SEARCH/JOG CONTROL ASSEMBLY INSTALLATION

1. When inserting the screws ⑤ of Fig. 2, tighten to the degree the structure does not distort (3 to 4 kg·cm torque). After tightening, apply screw sealant to screw hole.

**Note 1:** If the screws are too tight, the search plate and search knob will not turn smoothly. If this occurs, set the section horizontally and retighten the screws to 3 to 4 kg·cm torque (Fig. 3).

**Note 2:** Be sure to apply screw sealant to prevent loosening and loss.

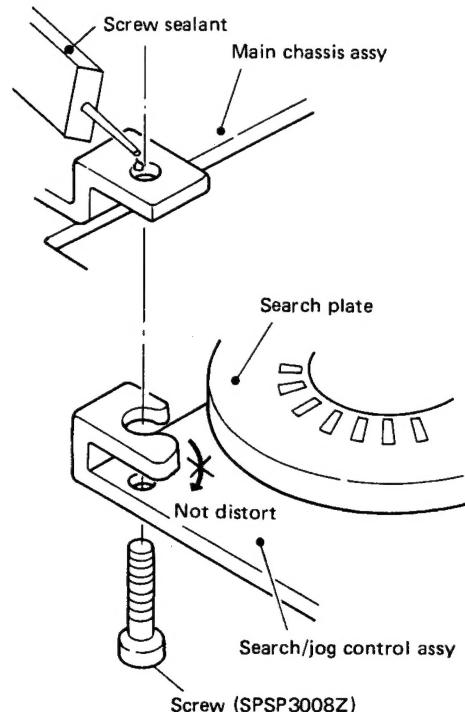

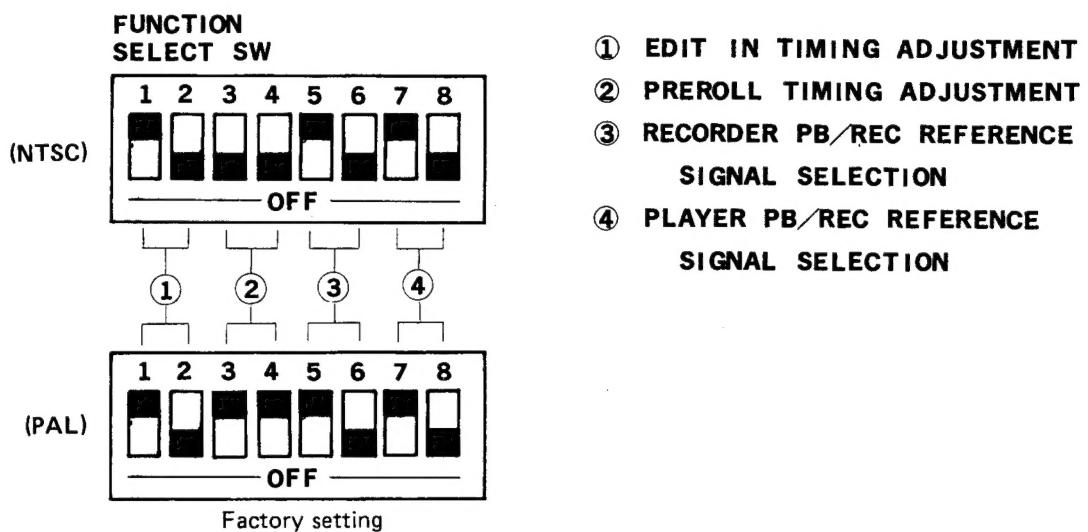

Fig. 3

## 1.4 DIP SWITCHES

### 1.4.1 Function select switches (rear panel)

These switches can be used for setting the following functions.

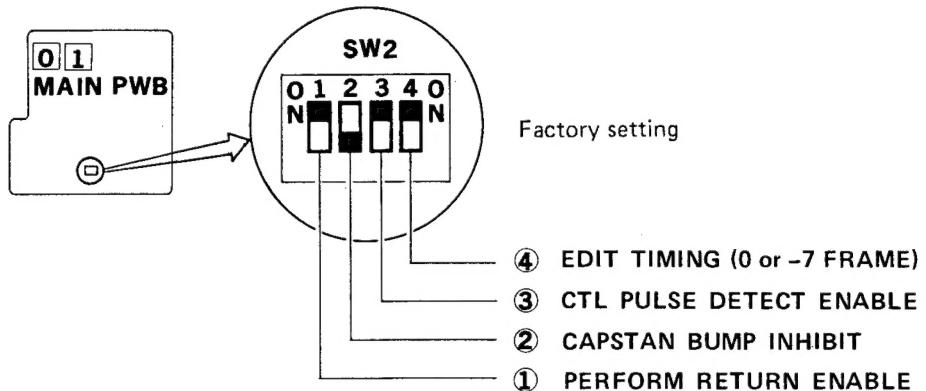

- ① EDIT IN TIMING ADJUSTMENT
- ② PREROLL TIMING ADJUSTMENT
- ③ RECORDER PB/REC REFERENCE SIGNAL SELECTION
- ④ PLAYER PB/REC REFERENCE SIGNAL SELECTION

|     |                                | ON             | Enables Edit in/out point setting with preset edit timing sw. |
|     |                                | OFF            | Enables Edit in/out point setting to -7 frames.               |

## SECTION 2

### ELECTRICAL ADJUSTMENTS

#### 2.1 BEFORE ADJUSTING

##### 2.1.1 Power supply

Power is supplied and the unit is operable when connected to VTRs. However, although 12 V is obtained via pin 34 of the 45-pin connector, since the recorder and player side circuits are independent, power is obtained from both machines.

##### 2.1.2 Main circuit 5 V

Before proceeding to other checks and adjustments, with both recorder and player connected, check according to the table.

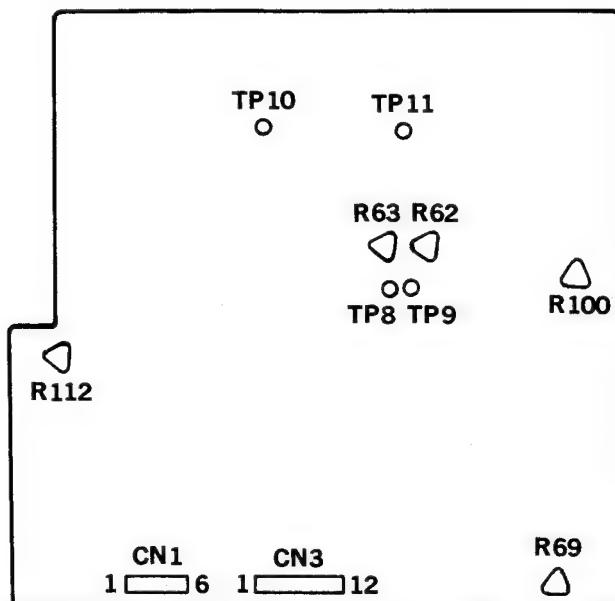

| Measure side<br>Check point | CN1<br>[1 pin]  | CN3<br>[9 pin]  | CN3<br>[10 pin] |
|-----------------------------|-----------------|-----------------|-----------------|
| Recorder                    | $4.9 \pm 0.2$ V |                 | $5.2 \pm 0.2$ V |
| Player                      | $4.9 \pm 0.2$ V | $5.2 \pm 0.2$ V |                 |

**Notes:** • Supply power only to the side being measured. Disconnect the cable of the other side.

- Also, for subsequent adjustments and checks, supply power only to the side being adjusted.
- Use the accessory cable (5 m).

## 2.2 MAIN CIRCUIT

Check points and adjustments (parts side)

## SECTION 3

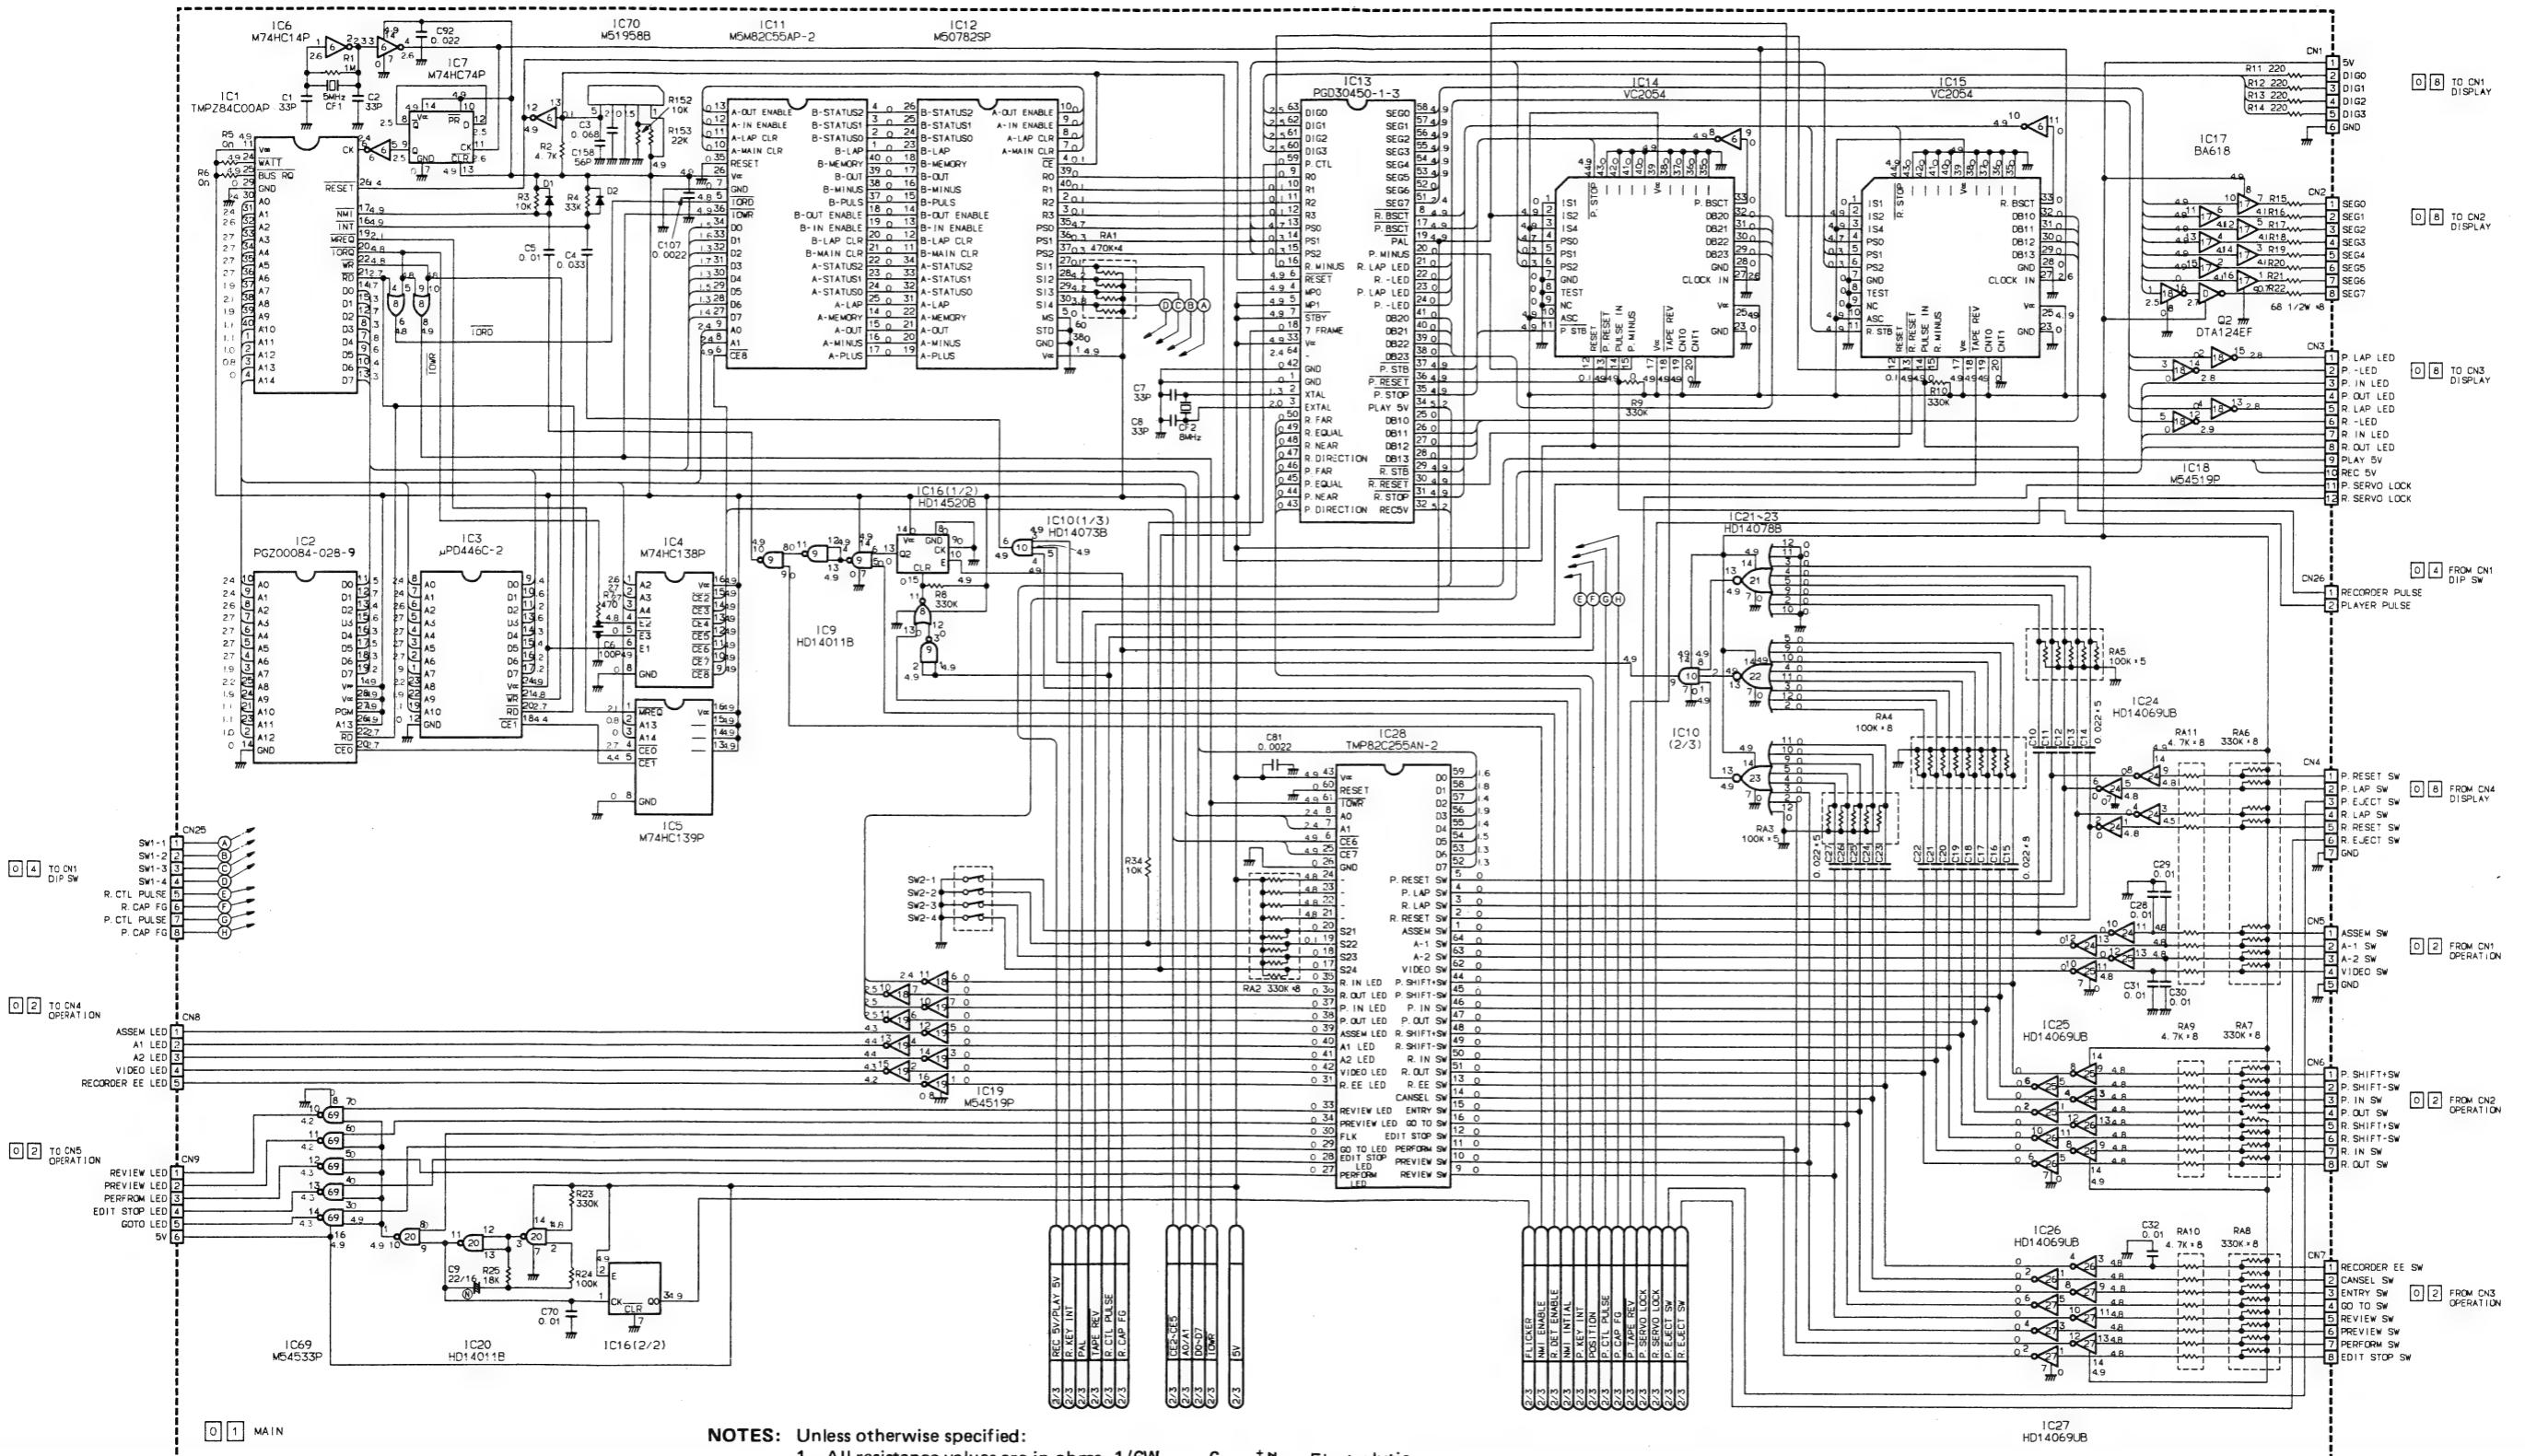

## CHARTS AND DIAGRAMS

## 3.1 BLOCK DIAGRAM

### 3.2 MAIN SCHEMATIC DIAGRAM

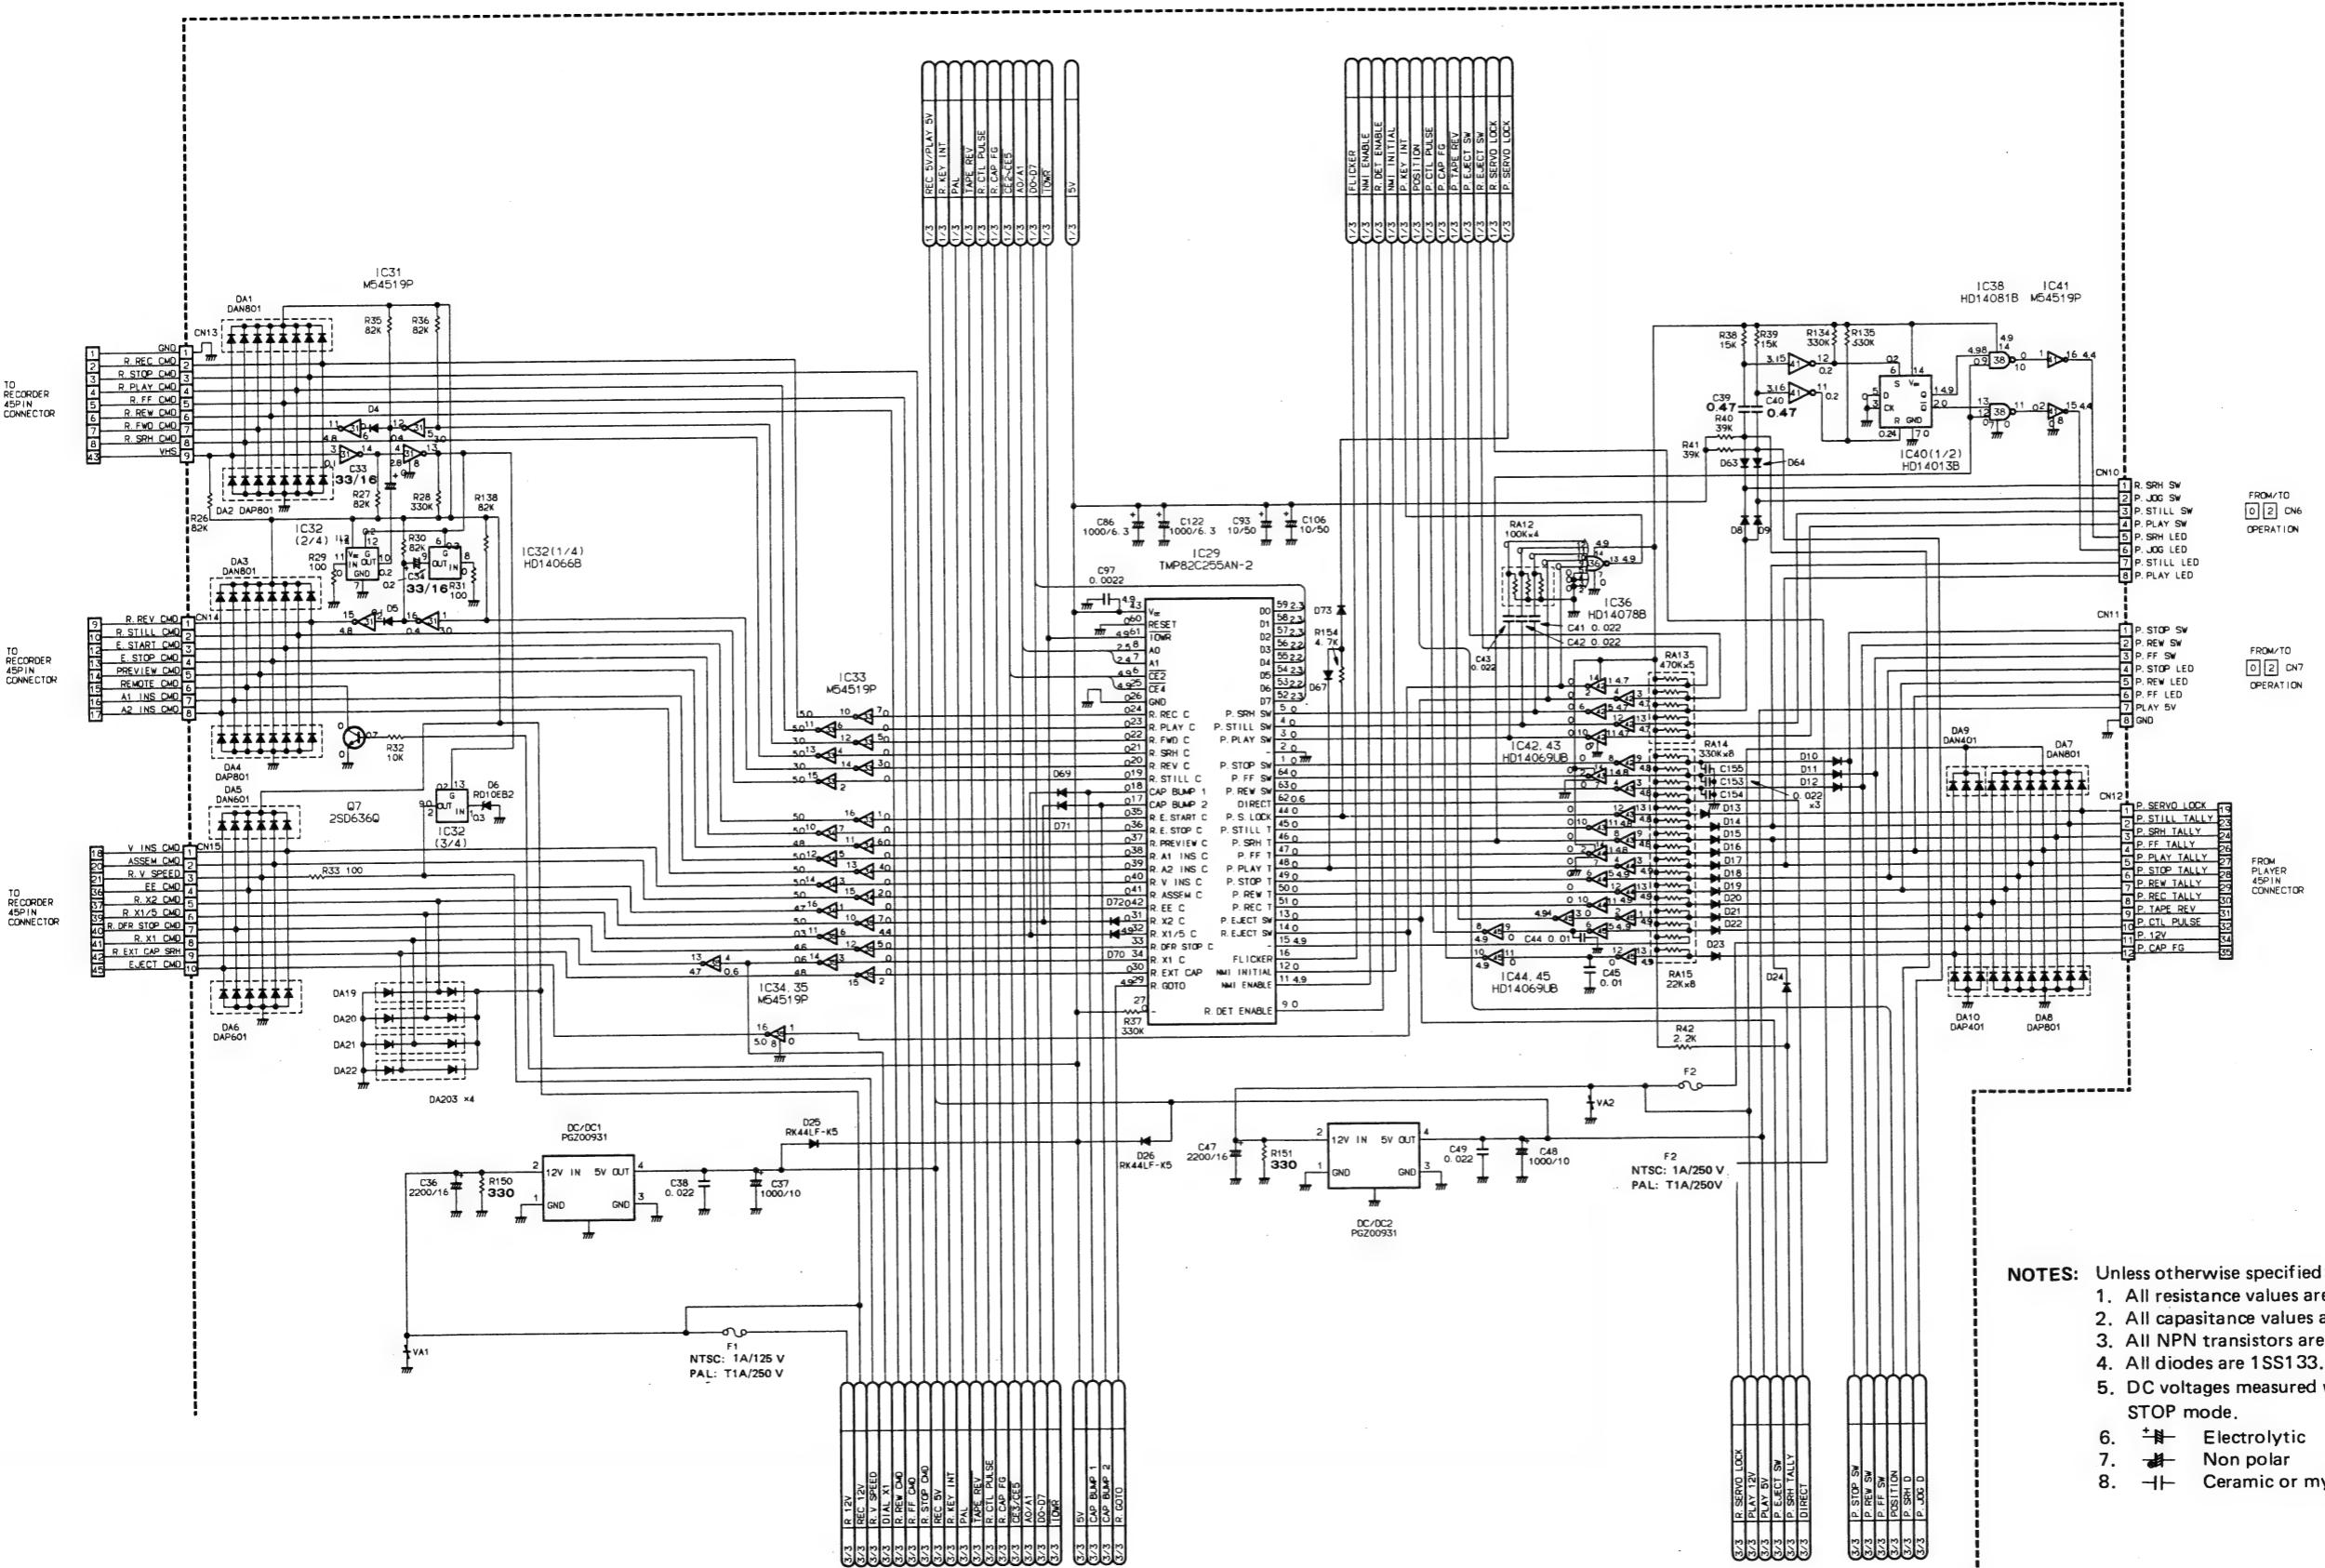

– DIAGRAM 1/3 –

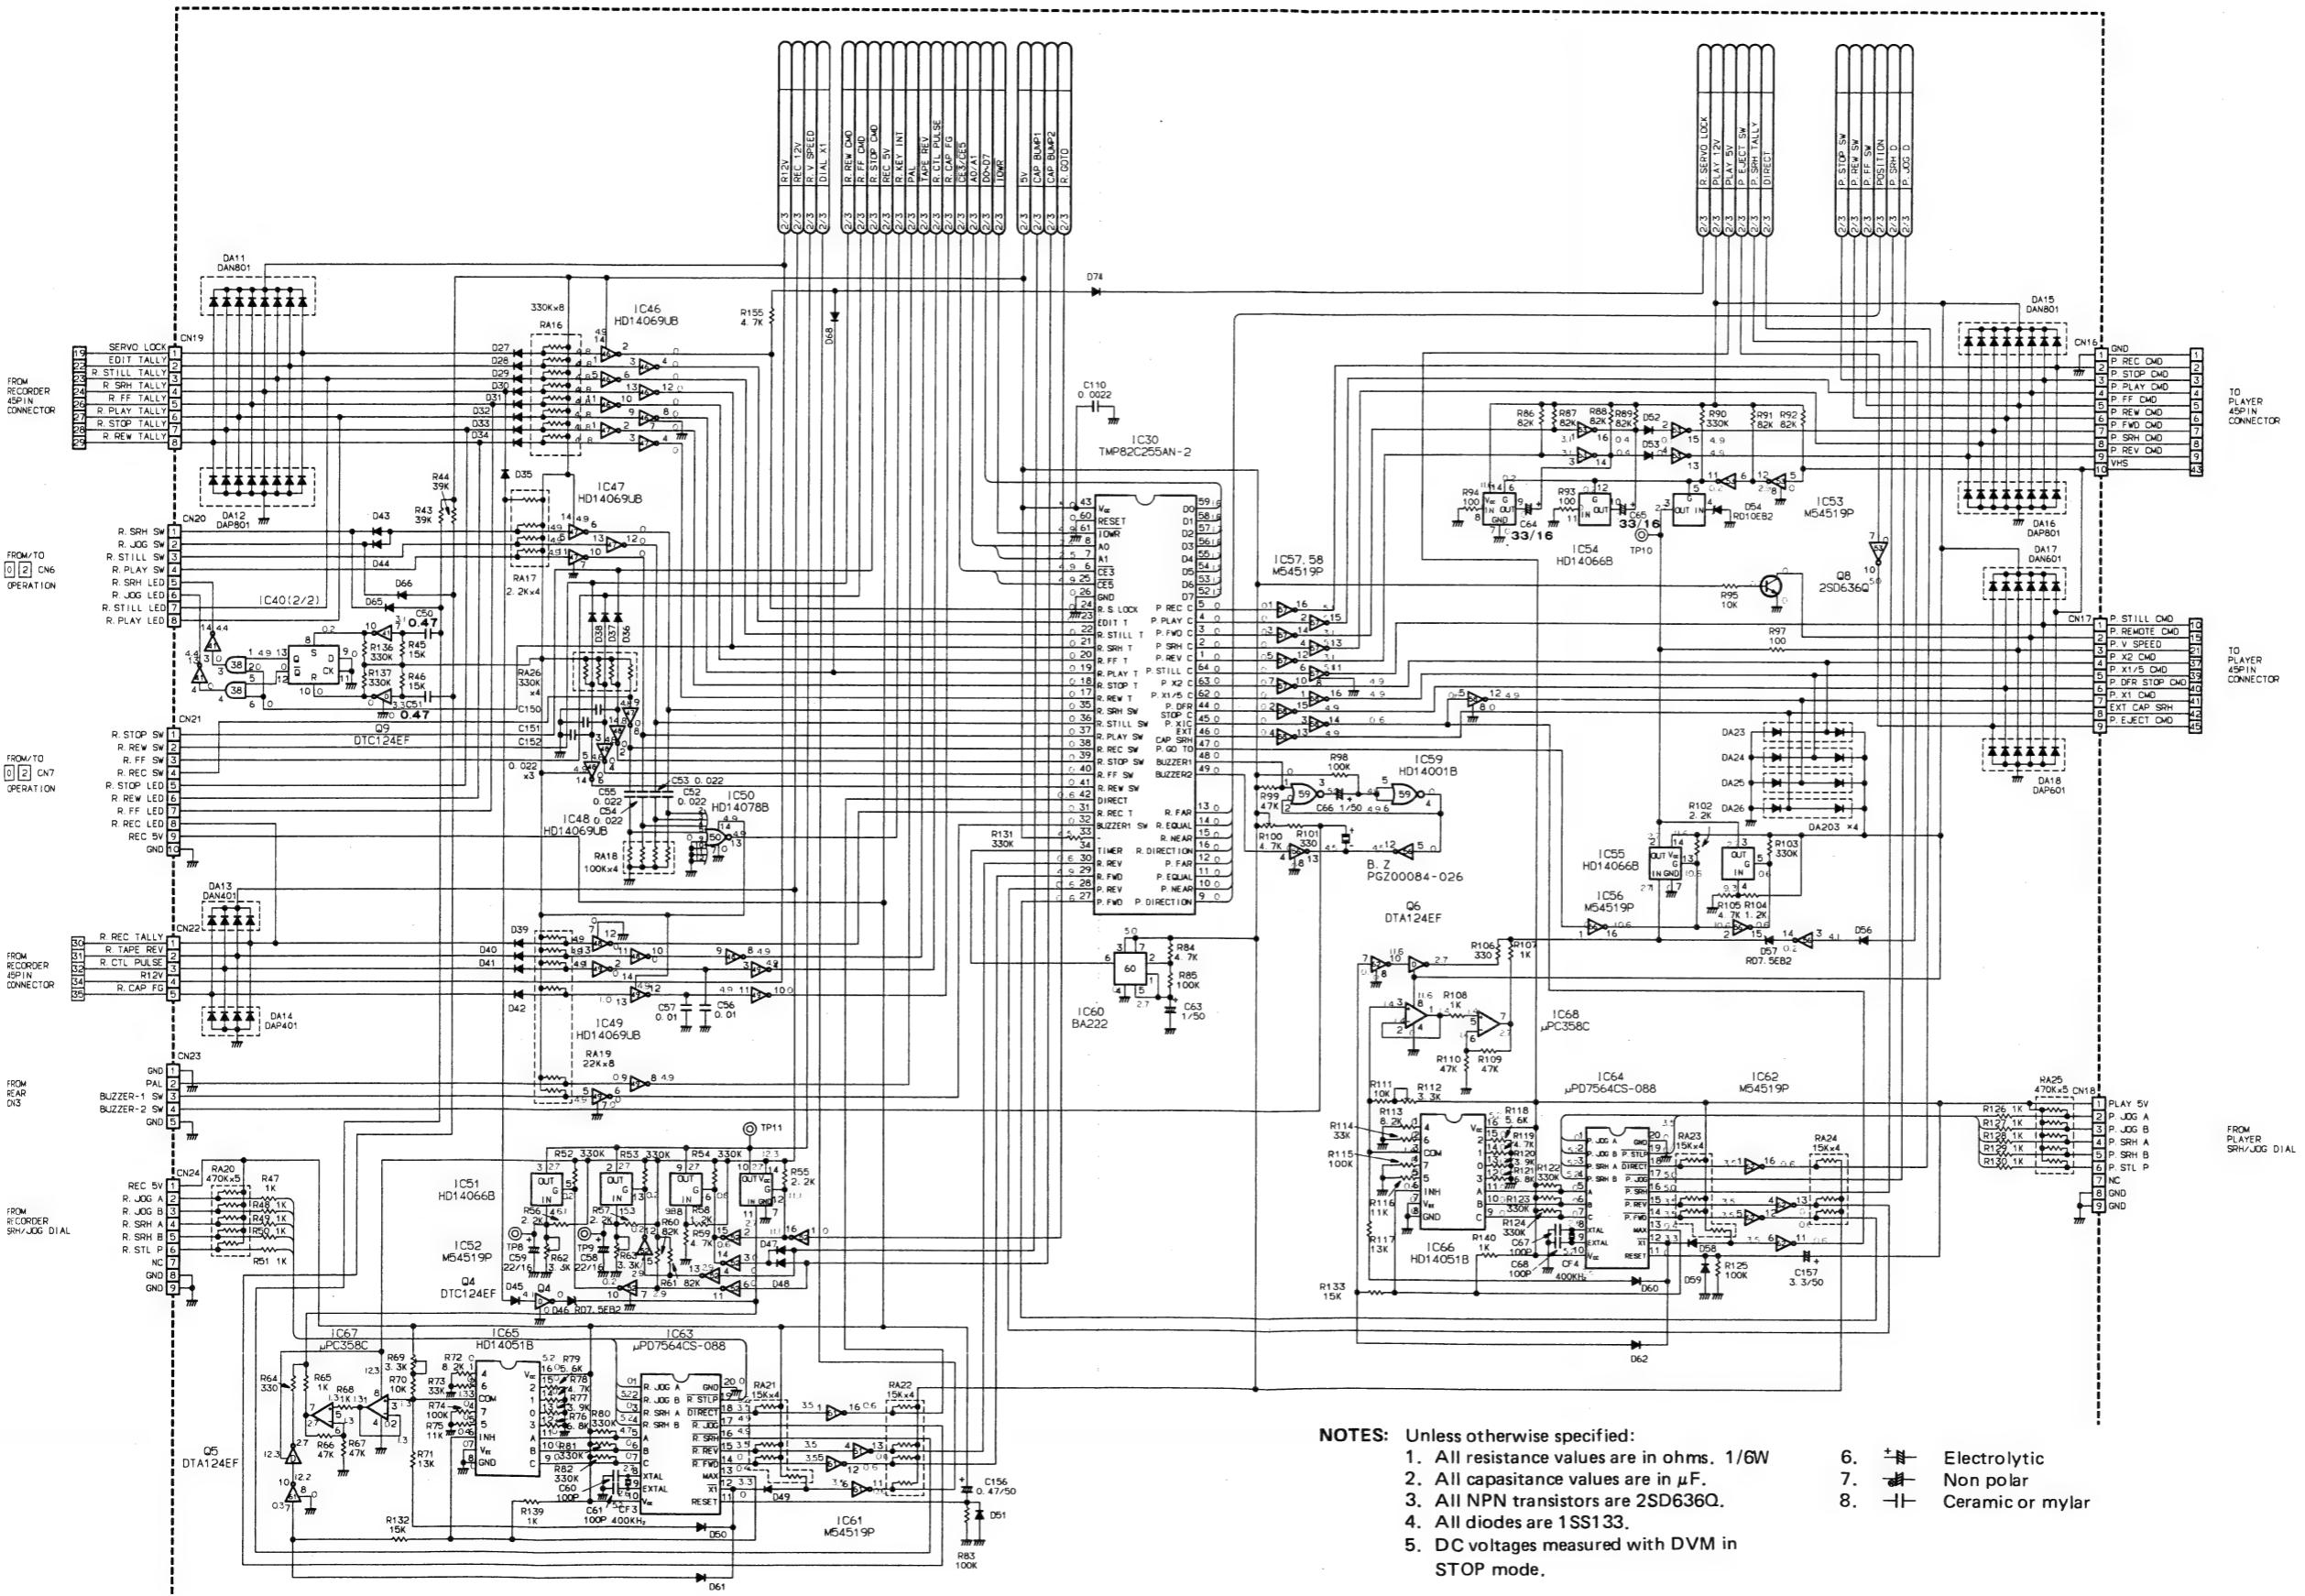

**NOTES:** Unless otherwise specified:

1. All resistance values are in ohms. 1/6W
2. All capacitance values are in  $\mu\text{F}$ .
3. All NPN transistors are 2SD636Q.
4. All diodes are 1SS133.
5. DC voltages measured with DVM in STOP mode.
6.  Electrolytic
7.  Non polar
8.  Ceramic or mylar

Dual D-type Flip-Flop with Set and Reset

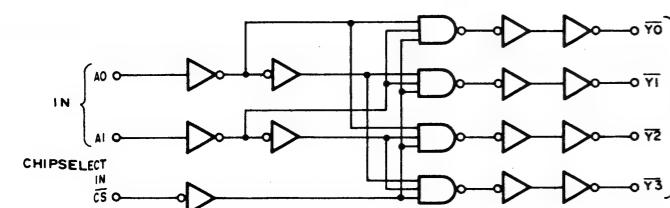

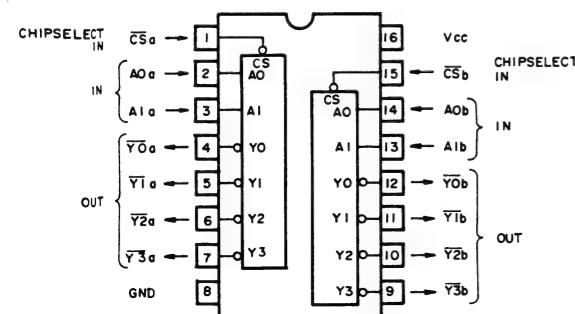

TRUTH TABLE NOTE 1

| 入 力         |             |    |   | 出 力   |             |
|-------------|-------------|----|---|-------|-------------|
| $\bar{S}_D$ | $\bar{R}_D$ | CK | D | Q     | $\bar{Q}$   |
| L           | H           | X  | X | H     | L           |
| H           | L           | X  | X | L     | H           |
| L           | L           | X  | X | H*    | H*          |
| H           | H           | L  | X | $Q^0$ | $\bar{Q}^0$ |
| H           | H           | ↑  | H | H     | L           |
| H           | H           | ↑  | L | L     | H           |
| H           | H           | H  | X | $Q^0$ | $\bar{Q}^0$ |
| H           | H           | ↓  | X | $Q^0$ | $\bar{Q}^0$ |

NOTE 1 x : Either "L" or "H"  
 ↑ : Rise from "L" to "H"  
 ↓ : Fall from "H" to "L"  
 $Q^0$  : Q output state before clock input change  
 $\bar{Q}^0$  :  $\bar{Q}$  output state before clock input change  
 \* :  $Q = \bar{Q} = "H"$  when  $SD = RD = "L"$ .  
 But when SD and RD are simultaneously  
 "H", Q and  $\bar{Q}$  states are unpredictable.
